

# SHAPE ROLLING

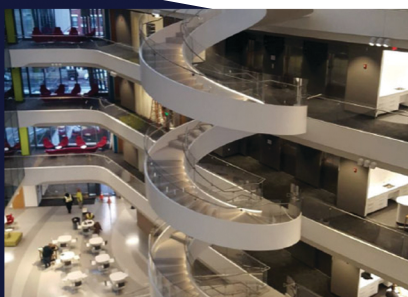

Originally founded as Charles Freadman & Sons in 1905, Freadman Steel has been in operation for over 100 years with the fourth generation of the family currently running the business. Freadman specializes in the custom rolling, forming & bending of carbon steel, stainless steel, aluminum and other alloy shapes.

Located in western Massachusetts we service all of New England, upstate New York, The New York metropolitan area

and northern New Jersey from our 40,000 sf operations center with multiple Roundo® and Swebend® shape rolling machines with the largest being a Roundo® R11.

Freadman services a wide range of industries from construction to shipbuilding. Our finished products are incorporated into structures large and small from buildings and bridges to ships. Visit our website to see our full range of services available.
